Introduction

WHAT IS TRANSACTION INPUT?

Transaction input is an AFRS system function that provides for the online entry of financial transactions.

The first step in transaction input is creating an AFRS batch header. The AFRS batch header comprises part of the transaction ID which uniquely identifies the individual financial transactions in the AFRS system, and the batch header contains two control totals for batch balancing. Once the batch header is created, financial transactions are entered on-line where they are extensively edited for valid codes. A batch cannot be released until the batch control totals balance with the transaction totals.

Note: It is **very important** for agencies to review their internal control procedures and system security records. OFM recommends agencies use AFRS system security so that the Transaction Input, Batch Release, Error Correction, and Agency Vendor Maintenance functions are performed by separate individuals. Agencies should utilize the transaction review screens prior to releasing batches.

A released batch will process at night. A released batch can be recalled before the nightly processing and the batch header and/or financial transactions can be deleted, changed, or added. The nightly processing creates daily reports which list by transaction ID the financial transactions that posted to the AFRS master files, went to the AFRS error file, were rejected from entering the AFRS system, were deleted from the AFRS error file, or were deleted from the payment write file (also used for EFT, IAP, and IFT). The transaction counts on the daily reports should be reconciled to the transactions released.

TRANSACTION ID

The transaction ID is a 22 position field which uniquely identifies a specific batch or financial transaction. The AFRS batch header creates the first 15 positions of the transaction ID consisting of the agency and batch date (which are system supplied and protected), batch type, and batch number. **In the same day, a different batch type and/or batch number is required, and a system edit ensures that duplicate batch headers** are not created during online input. The batch type and batch number become protected once a transaction input screen is accessed.

The Transaction Type is assigned at this point by the system.

The AFRS system assigns a five position sequence number for each financial transaction in a batch. The sequence number is used to delete a transaction or recall a transaction for change before a batch processes at night. The transaction sequence number along with the batch header information (agency, batch date, type, and number) creates the transaction ID. The transaction ID is used to designate a batch or a transaction for corrections to payment write transactions. This unique transaction ID sorts and displays the financial transactions on selected AFRS daily and ER reports.

The transaction ID is composed of the following fields:

On daily control reports, the transaction ID for the batch header usually contains zeros in the Transaction Sequence Number and Duplicate Record Indicator.

PAYMENT BATCH NUMBER

A payment transaction via AFRS may be entered in any batch and involves two transactions:

1. **Payment transaction code** (such as 210)

To create a payment, the Transaction Code Payment Field must have one of the following:

- '1' = Warrants/ACH
- '3' = Credit Memo for warrants/EFT's
- '7' = Inter-Agency Payment (IAP)
- '8' = IAP Credit Memo
- '5' = Inter-fund Transfer (IFT) CREDIT (dr 7140/cr xxxx)
- '6' = Inter-fund Transfer (IFT) DEBIT (dr xxxx/dr 7140)

A warrant, ACH, or IAP payment will be produced depending on Vendor Record and Batch Type.

IAP & ACH Payments (non-employees) must use statewide vendor numbers.

Warrant payments must use statewide vendor numbers or Exception Code.

2. **Payment wrap transaction code** (such as 398 or 818)

The payment wrap is System generated which defaults to current day's date. This due date is established on the Create Batch Header (IN.1) unless changed by the agency at the batch level or transaction level.

Input Initial Batch

1. To access the Input/Correction Menu screen (IN), enter your **Agency Code** and type **IN** on the AFRS Primary Menu.

```
=== AFRS ===== PRIMARY MENU ===== C105P05A ===
  TM -- TABLES                                IN -- INPUT/CORRECTION

  MI -- MASTER FILE INQUIRY                    VE -- VENDOR/PAYMENT/CANCELLATION
  RD -- ON-DEMAND REPORTING                     RR -- REPORT REQUEST
  BI -- BATCH INTERFACE LOG                     OM -- OMWBE SUB-CONTRACTOR REPORTING
  SS -- SYSTEM SECURITY                         IR -- IRS 1099 MENU
  CL -- HELP PHONE LIST                        AD -- ADMINISTRATION
  EX -- EXCHANGE DATA SETS

                                     AGENCY: 9990
                                     SELECT FUNCTION: IN

                                     PF3=RETURN, PF12=MESSAGE, CLEAR=EXIT

PRIVACY NOTICE:
THE AFRS SYSTEM DOES NOT COLLECT PERSONAL INFORMATION FROM SYSTEM USERS.
THE SYSTEM FILES/PRODUCTS MAY CONTAIN PERSONAL INFORMATION ABOUT CITIZENS.
SAFEGUARDING/DISPOSITION OF AFRS FILES/PRODUCTS MUST COMPLY WITH EXECUTIVE
ORDER 00-03, 4/15/00; RCW 42.17.310; AND THE FEDERAL PRIVACY ACT OF 1974.
```

2. This will take you to the INPUT/CORRECTION MENU screen where you can select from one of the following three screens:
 - CREATE BATCH HEADER = Selection 1 is to enter a batch of financial transactions.
 - PAYMENT MAINTENANCE = Selection 2 is for deleting payment transactions from the payment holding file or change a future due date.
 - VIEW BATCH HEADERS = Selection 3 is to view a listing of batch headers and their status. From this screen, you may select other screens to add/update/delete **transactions in the online holding file** prior to nightly processing. Batch reviewers may also select screens to browse transactions and release batches.

CREATE A BATCH HEADER (IN.1)

The **CREATE A BATCH HEADER** activity accomplishes the following:

- Creates a unique batch header allowing on-line entry of financial transactions.
- Identifies the batch biennium.
- Enters the fiscal month on each financial transaction as the default posting fiscal month.
- The AFRS system provides today's date as the default warrant batch due date.
- Contains two control totals for batch balancing.

1. To access the Create Batch Header screen (IN.1), enter **IN** on the AFRS Primary Menu, and then select **1** on the Input/Correction Menu.

```

=== AFRS =(IN)===== INPUT/CORRECTION MENU ===== C105P05B ===
TR: _____ 9990

          1 -- CREATE BATCH HEADER

          2 -- PAYMENT MAINTENANCE

          3 -- VIEW BATCH HEADERS

SELECT FUNCTION: 1

PF3=RETURN, PF12=MESSAGE, CLEAR=EXIT

```

2. Type in **Batch Type**.

- AFRS provides the option to set up security level access by batch type & transaction type for the following functions: transaction input and batch release.
- In some instances, agencies may use batch type to identify payment batches as either being for inserted warrants or regular warrants. If the payment type (regular warrant, inserted warrant, ACH, or IAP) has not already been determined by the transaction code or vendor record, AFRS will check to see if the Batch Type used indicates the payment type on the Payment Process Controls screen (VE.6).
- Agencies may also use batch type to group types of transactions or to identify the section and/or location where the batch is created.
- There are several batch types that agencies may not use because they are used by statewide systems such as payroll or accounts receivable or by the State Treasurer. The batch types which may not be used are the following:

P_	Payroll
QS	Accounts Receivable System
QT	Allotment System
T_	State Treasurer
W_	AFRS Restricted for old processes (WC=Warrant Cancellation, WS-SOL, & WW-System payment wraps)
X_	To only be used for accrual process (see below)
Y_	Automatic Reversal of AFRS Batch Type X_ - described below
Z_	Material Prior Period Adjustments by OFM per SAAM, 90.20.15d

- Using **Batch Type X_** (X as the first letter of Batch Type) will create a reversing batch (Type Y_) in the next fiscal month. **Batch Type X_** is commonly used for month end accrual and other transactions with certain exceptions.

Note: The Y Batch will post within three business days after input if the next fiscal month is open. If you enter the batch before the next fiscal month, it will post within one business day.

- **Batch Type X_:**

- § Submitted in **FM 12** will be reversed in **FM 13**.
 - § Submitted in **FM 99** will be reversed in the current month.
 - § Should not be used in **FM 12** or **FM 99** to accrue expenditures for single year operating appropriations.
 - § Should not be used for accrual transactions in **FM 24** (as they would be reversed in **FM 01** against new biennium appropriations).
 - § Is not allowed in **FM 25**.
 - § Cannot be used to reverse **warrant, EFT, IAP, or IFT** transaction codes.
 - § Cannot be used to reverse any **encumbrance** transaction codes which post to the document file.
3. Type in **Batch No** (Number). A consecutive number is commonly used for a period of time (fiscal month, year or biennium). If more than one batch is entered on the same day, a different batch type and/or batch number is required on each batch to avoid duplicate batch headers.
Important: If duplicate headers are created, both batches will be rejected.
 4. Type in **Biennium** (last two digits of the second fiscal year of the biennium).
 5. Type in **Fiscal Month**. This is the fiscal month in which the batch is entered. This Fiscal Month is the default fiscal month the system will enter on each transaction. The fiscal month on each transaction is the posting fiscal month. (Valid values are 01-24, 99, and 25.)
 6. **Due Date** is the payment batch process due date. This field defaults to the current date and will process that night. Agencies have the option to change the Due Date at Batch Level or Transaction Level to a Future Date.
Note: Future due dates entered by mistake is a common reason why agencies do not receive warrants when they are expected.
 7. Type in the **Number of Transactions in the Batch**. Count each transaction coded on the input form(s). If you are using Master Index, count each line of coding accessed by Master Index as a separate transaction. AFRS right justifies this field. It is recommended that agencies keep batches small (50 transactions or less) as it is easier to find errors.
 8. Type in **Batch Amount**. Enter the total amount of all transactions in the batch. Batch Amount is a hash total which means all amounts – **regardless of debit or credit** – are counted as positive. The last two digits in this field represent cents. Do **not** enter decimal point, commas, or dollar sign. AFRS right justifies this field.

```

=== AFRS =(IN.1)===== CREATE BATCH HEADER ===== C105P010 ===

```

ENTER FINANCIAL TRANSACTIONS (IN.1.1)

The **ENTER FINANCIAL TRANSACTIONS** activity accomplishes the following:

- Provides for online entry of financial transactions.
- Writes financial transactions entered to a holding file where they are balanced and released for nightly processing. After release but prior to the nightly update, transactions can be recalled for correction and again released for nightly processing.

1. Create Batch (IN.1):

Agencies have one option available for input that is selected on the IN.1 screen and it is:

Expanded General Accounting Transaction Input (IN.1.1) includes all vendor & coding elements and allows **one invoice number**.

```

```

2. Function Field

R is the default function. The chosen functions remains for subsequent entries and can be changed for each financial transaction. The codes are as follows:

F=FRESH SCREEN - Clears or blanks all coding elements from the screen upon pressing [Enter].

R=RETAIN DATA–Clears the dollar amount only upon pressing [Enter]. Also clears transaction codes, such as 216, which are for credit memos on payments. The screen retains the coding elements from the prior entry. The retained codes must be changed or erased, or they will become part of the new entry.

When Master Index (MI) is typed in and [Enter] is pressed, the coding elements from the first Master Index percent record are highlighted and protected. When a new Master Index is typed in and [Enter] is pressed, the new data will overlay **only** those elements that are associated with the new MI. The protected coding elements from the prior, if not in the new Master Index, will become part of the new entry. To change or erase these coding elements the transaction must be recalled for correction.

V=VERIFY–Requires that [Enter] be pressed twice before the entry is accepted. Pressing [Enter] the first time will highlight the coding elements from the first percent record of Master Index. The coding elements not part of the Index will not be highlighted. If the is not changed, pressing [Enter] a second time will cause the entry to accept and will blank the Master Index, the coding elements and the dollar amount. All other elements will remain on the screen. (NOTE: This process will be going away.)

X=RESET VENDOR–This action allows the user the ability to change the vendor from a Statewide Vendor Number to an Exception Code. It will clear all vendor information and remove the function. You will be required to enter the following depending which Expanded General Accounting Transaction Input screen you are on:

- C105P20E = IN.1.1 or "S" (select) you will either enter an "R" (Retain Data) or "V" (Verify) in the Function Line. You will then be able to enter the exception code and address information. It will retain the coding information as well unless you use the "F" (fresh) screen that removes all the coding.
- C105P20Z = Browse or Error you will either enter an "A" (Add) or "C" (Change) in the Function Line. You will then be able to enter the exception code and the address information. It will retain the coding information as well.

3. Document Date (Doc Date)

The Document Date defaults to the current date, agencies have the ability to type the document date in MMDDYY format. Date used must be a real date. The document date must be within the start and end dates specified on the Appropriation Index, the Project Control, and the Master Index Tables if these coding elements are used.

4. Current Document Number and Suffix (Curr Doc No and Sfx)

Required - Agency supplied.

5. Reference Document Number and Suffix (Ref Doc No and Sfx)

Optional Field - If making a payment that requires a matching document number (such as for encumbrances) AFRS online edits will indicate if a particular transaction code requires that a reference document number be entered.

6. Due Date

Agencies can designate a future payment due date for transactions if desired. If this field is left blank, AFRS will default to the current date.

Note: Future due dates entered by mistake is a common reason why agencies do not receive warrants when they are expected.

7. Vendor Number and Suffix (Vendor # and Sfx)

If using a Vendor Number enter the complete number. The Vendor Number must include a Vendor Suffix. **Note:** If you hit enter before completing the transaction, it will fill in the vendor's address information and Payment Type)

Accessing Vendor File during Input:

- **PF4 (Combined Vendor Selection)** screen. Contains Agency vendor and statewide vendors. Allows agency to choose appropriate vendor number by searching the IN.1.V screen and then selecting the vendor to be added to the transaction
 - “ In **function**, type **P**=Partial Search.
 - “ Type your search criteria in one of the following fields: Vendor Name, Vendor Number, TIN, or ZIP Code and press [Enter].
 - “ A combined list of the first 999 vendors meeting your criteria will be displayed.
 - “ In the **line function**, type one of the following and press [Enter]:
 - § **T** to add the vendor number to the transaction or
 - § **S** to select vendor record details for viewing.

8. **Exception Code**—The Payment Exception Code replaces the Pseudo Numbers that were used by agencies to make non-IRS reportable payments and Revenue Refunds. These Exception Codes can be used for payments when defined conditions exist.
9. **Vendor Type**—System will display the vendor type once a vendor number has been entered or it can be entered when using the Exception Code. It must be a valid vendor type and can be looked up on the D77 table in the Table Maintenance screen.
10. **PT (Payment Type)**—System will display the Payment Type that is on the statewide vendor or batch once a vendor number has been entered. Payment Type is protected.
11. **Vendor Name**— Name will display when vendor number is entered or can be entered directly when using the Exception Code. Field is 32 characters long.
12. **TIN (Number)**—TIN will display when vendor number is entered. It can be entered or left blank when using the Exception Code. Field is nine characters long and will format based on the Tax Type.
13. **ADDR1 (Address one)**—ADDR1 will display when vendor number is entered or can be entered directly when using the Exception Code. This field is used to continue the vendor name, show the DBA name or can be the first line of the address. Field is 32 characters long.
14. **Tax Type**—Tax Type will display when vendor number is entered. It can be entered or left blank when using the Exception Code. Field only accepts an S, T, or R.
15. **ADDR2 (Address two)**—ADDR2 will display when vendor number is entered or can be entered directly when using the Exception Code. This field is used to continue the vendor address or it can be the first line of the address. Field is 32 characters long.
16. **USE Tax**—USE Tax can be entered with a “Y” to denote that this has associated USE Tax that needs to be sent to the Department of Revenue. Field is one character long.
17. **ADDR3 (Address three)**—ADDR3 will display when vendor number is entered or can be entered directly when using the Exception Code. This field is used to for the second or it can be the third line of the address. Field is 32 characters long.
18. **UBI (Uniformed Business Identification) Number**—UBI number can be entered by agency when vendor name is present but is not required. Optional Field and is 9 characters long.

19. **CITY/ST/ZIP**–CITY/ST/ZIP will display when vendor number is entered or can be entered directly when using the Exception Code. There are three separate fields fill in city = 19 characters, state = 2 characters, and zip = 9 characters (ZIP+).
20. **US/FOR ADDR**–US/FOR(EIGN) ADDR will display when vendor number is entered or can be entered directly when using the Exception Code. This field identifies the address as being a foreign address and will change the edits to free form for entry of the foreign address.
21. **Account Number (Account #)**–30 character field to contain account number assigned by vendors to agencies.
22. **Vendor Message (Vend Msg)**–The information entered in the Vendor Message field will appear on the vendor remittance advice. If multiple warrant write transactions are combined for one warrant, each transaction vendor message will display on the remittance advice
23. **Agreement ID**–11 character field to for Agreement Numbers such as; DES Contracts, Enterprise Contracts Management System (ECMS) Contracts, etc.
24. **Order ID**–Five character field to contain order number as entered in the ECMS only.
25. **CFDA (Catalog of Domestic Assistance)**–Seven character field that will display if the appropriation index (expenditure authority) has an associated CFDA defined within it.
26. **Transaction Code (Trans Code)**–A three digit code that defines a transaction debit and credit, valid Transaction Code is always required. After typing in the Transaction Code, press [Enter] and the required fields will display in red. Enter the remainder of the screen as required.
27. **Modifier (Mod)**–This field is used for encumbrance liquidation transaction codes.
28. **Reverse (Rev)**–This field is used to reverse a previously entered transaction. NOTE: Cannot be used with a Payment Transaction (e.g. 210, 955).
29. **Posting Fiscal Month (Posting FM)**–Fiscal Month that transaction will post. Only an open fiscal month can be entered.
30. **Agency**–Pre-populated from batch header.
31. **Coding Elements**–Please refer to the **INPUT RECORD CODING ELEMENTS-ALPHABETIZED** manual for descriptions and explanations of individual coding elements.
32. **Request Regular Warrant**–One character field that overrides an EFT/Inserted payment to a Single Check (S) (individual transaction) or a Regular Warrant (R) (summarized transactions) that are returned to the agency.
33. **Amount**–The dollar amount for a particular transaction (entered without decimals).
34. **Invoice Date (Inv Date)**–Invoice is required for all agencies when making a payment. Optional for when making an adjusting entry.
35. **Invoice Number (Inv #)**–30 characters long that contains invoice number provided by vendors. Required for all agencies when making a payment. Optional when making an adjusting entry.
36. Press [Enter].
37. The message TRANSACTION SUCCESSFULLY ADDED will appear.
38. Enter the rest of the transactions in the batch. After entering the last transaction, press **F6** to go to Batch Balance screen.

BATCH BALANCE (IN.1.7)

The **BATCH BALANCE** activity accomplishes the following:

- Allows verification that the batch header transaction count and amount as originally entered on the Create Batch Header screen (IN.1) matches the transaction count and amount computed from the transactions entered.
- Allows agency to make corrections to the amount and count on the "Batch Header".

To access the Batch Balance screen, press **F6** on one of the following screens:

- Expanded General Accounting Transaction Input (IN.1.1)
- Expanded General Accounting Transaction Input (C105P20Z) screen through the "Browse" feature on the IN.3 screen
- Release Batch (IN.1.5)
- View Input Batch (IN.1.6)
- Recall Batch For Correction (IN.4)
- Group Error Correction – Online (C105P041)
- Batch Header Error Correction online (C105P011)
- Payment Transactions (C105P056)

```

TR: _____

          BATCH AGENCY: 1050
          BATCH DATE: 131206 (YYMMDD)
          BATCH TYPE: DT
          BATCH NO: 111
          DUP IND: 0
          BIENNium: 15
          FISCAL MONTH: 06
          DUE DATE: 120613 (MMDDYY)

ENTER NUMBER OF TRANSACTIONS IN BATCH:      1

          ENTER BATCH AMOUNT:                  100.00

COMPUTED NO OF TRANSACTIONS IN BATCH:      1

          COMPUTED BATCH AMOUNT:                100.00

          PF2=RELEASE BATCH, PF3=BATCH SUMMARY, PF5=VIEW BATCH, PF12=MESSAGE
THIS BATCH IS BALANCED--SELECT FUNCTION
```

The incorrect transaction count and/or amount can be fixed by clearing the field information. Tab to the beginning of the incorrect field and delete the entry. The END key maybe set on your PC to erase the data.

Then type in the correct number or amount and press Enter. Note that a ten dollar amount would be keyed 1000 as there are no decimal points within AFRS. After the transaction is accepted, the screen will display that same amount as 0000000001000. The message BATCH HEADER REWRITTEN will appear at the bottom of the screen. If you leave and return to this, that same amount will then display as 10.00.

Batch Release (IN.1.5)

The default setting is **H** [Hold]. The batch status can be changed from Hold to Release and back at any time and only executes during the nightly update. A batch must be in balance before **R** [Release] will be accepted. The valid function codes are as follows:

R=Release the batch. **(Press Enter once)** The batch will process during nightly update

D=Delete the Batch header and transactions. **(Press Enter twice)** Deletes batch instantly after the second enter.

H=Hold the batch. The batch will not process during the nightly update. **(Press Enter Once)**

A balanced batch can be released for AFRS nightly processing. To release a batch, press **F2** after your last transaction entry, if you have the proper security, this will take you to the Release Batch (IN.1.5) screen where you can Type **R** [Release] and press Enter.

```
=== AFRS =(IN.1.5)===== RELEASE BATCH ===== C105P040 ===

THIS BATCH IS BALANCED--SELECT FUNCTION
```

The Batch Release screen (IN.1.5) can be accessed by pressing PF2 from any of the following screens:

- Expanded General Accounting Transaction Input (IN.1.1)
- Expanded General Accounting Transaction Input (C105P20Z) screen through the "Browse" feature on the IN.3 screen
- View Input Batch (IN.1.6)
- Recall Batch For Correction (IN.4)
- Group Error Correction – Online (C105P041)
- Batch Header Error Correction online (C105P011)
- Payment Transactions (C105P056)

4. Limit To allows agencies to specify only certain headers to be visible on the IN.3 by using one of the following in conjunction with the Sort Order and press Enter:

- Batch Type with sort order B
- Trans Type with sort order T
- Status with sort order S

Note: No wildcards are allowed.

5. **Select (S) line** contains codes that a user can type on the line next to a batch header. Select codes are as follows:

Selection	To
B=BROWSE	Browse transaction(s) in a batch (Screen allows: add, change, or delete).
E=ERRORS	Displays errors only in a batch (Screen allows: add, change, delete, view, next, back, and reset vendor).
G=GROUP	Make group changes to the same field on all transactions within a given batch. Change biennium and fiscal month fields on all transactions in batch and on batch header .
H=HEADER	Change the following fields on the header : batch date/type/number/due date.
L=PRINT	Print reports of transactions in batch from screen (IN.3.1). DWP91001 Transaction Batch Report DWP91002 Warrant Cancellation Reports (DWP91002D Detail and DWP91002S Summary) Note: Used for Warrant Cancellation & ACH Returns. DWP91003 Online Error Report Note: Print Online Error Report to get a list of all errors in batch prior to making any corrections.
P=PAYMENTS	Preview list of <u>Payment</u> Transactions in a batch. Note: Will not show any information if not for a payment.
R=RELEASE	Release , delete or return to hold Batch on screen (IN.1.5)
S=UPDATE	Update Batch via Recall Batch for Correction screen (IN.4), then - F5 to View Input Batch (IN.1.6) for List of <u>All</u> Transactions in Batch or F6 to Batch Balance & Change Batch Header Count/Amount

6. The data displayed on the Batch Header Summary screen (IN.3) provides the values from the batch headers. The column meanings or uses are as follows:

- **S**=Select value entered
- **B DATE**=Batch date (system entered)
- **BT**=Batch type
- **NUM**=Batch number
- **DUP**=Duplicate indicator
- **TY**=Transaction type
- **ST**=Batch status
 - R**=released for nightly processing
 - H**=hold, not released for nightly processing
 - E**=errors that must be corrected prior to release

1=IFT amount does not summarize to zero (0)

2=IFT does not debit and credit 2+ funds

3=zero or negative payment in a batch

- **BAL**=Batch balanced

Y=Yes, batch control count and amount totals balance with the entered transactions.

N=No, control count and amount do not balance with the entered transactions.

- **BI**=Biennium

- **FM**=Fiscal month (input fiscal month)

- **DUE DATE**=Payment transaction(s) due date

- **COUNT**=Entered control count (from Batch Header)

- **ENTERED AMOUNT**=Entered control amount (from Batch Header)

- **OC=Origin Code.** Indicates system transaction originated from.

AF=AFRS Batch

AO=AFRS Online

AR=Accounts Receivable System

BA=BASS

BC=Biennium Close

BI=Batch Interface

ER=Error generated by the AFRS nightly process (NAPS)

FT=Financial Tool

IA=Inter-Agency Payment

PR=Payroll

AN ADD, CHANGE, OR DELETE WILL CHANGE BATCH STATUS

```

Note: This is the preferred screen to use when returning to a batch to add transactions using master index.

1. Type **A**, **C**, or **D** in the function field to update a financial transaction in a batch. Functions **C** and **D** require typing in the sequence number of the transaction to be updated. The function codes are as follows:
 - A** = Add financial transaction(s) to the batch. The Select Screen will default to a **1**. The system will assign the sequence number. Press [Enter].
 - C** = Change an existing financial transaction. Type in the system assigned transaction sequence number. The Select Screen will default to a **1**. Press [Enter].
 - D** = Delete an existing financial transaction. Type in the system assigned transaction sequence number. Do **not** input a screen in the select screen field. Press [Enter] twice.
2. "F" Keys (currently shown as PF) are as follows:
 - F2 = Release (IN.1.5)
 - F3 = Batch Summary (IN.3)
 - F5 = View Batch (IN.1.6)
 - F6 = Balance Batch (IN.1.7)

From Screen IN.3, select 'S' then F5 for:

The VIEW INPUT BATCH (IN.1.6) screen:

- Lists of financial transactions entered in a batch in sequence number order.
- Shows coding elements for several financial transactions at a time.

Note: To view one transaction at a time with **all** coding elements displayed, use the **B** [Browse] function on Batch Summary screen (IN.3).

1. To access the View Input Batch screen (IN.1.6): Press **PF5** on Release Batch screen (IN.1.5), Recall Batch for Correction screen (IN.2), or Batch Balance screen (IN.1.7).

```

PF2=RELEASE BATCH, PF3=BATCH SUMMARY, PF6=BALANCE BATCH, PF12=MESSAGE									
LAST RECORD DISPLAYED									

Note: This screen can be used to view any batch type, but will only display transactions that use payment producing transaction codes.

Agencies should use this screen to:

- Ensure vendor numbers have been entered correctly
- Ensure credit amounts have been entered correctly
- Ensure the absence of negative fund balances by vendor
- Select a transaction for update (requires Batch Input update security level of '2')

Type an **S** (Select) in the left column next to the transaction to view the transaction for update. Press [Enter] and the transaction will be displayed on the Expanded General Accounting Transaction Input (C105P20Z) "**Browse**" screen.

Note: If a batch was previously in "RELEASE" status selecting a transaction from the Payments Transaction screen will change the status to "HOLD" regardless of whether or not the transaction is changed.

From Screen IN.3, select 'B' for Batch Browse Function

The browse utility:

- Allows rapid review of entire batch, starting with first sequence number.
- Provides vital review capability prior to releasing a batch.
- Assures a higher quality of transactions.

Type **B** (=browse) before the listed batch on the Batch Header Summary screen (IN.3) and press [Enter] to bring up the **"BROWSE"** Screen below.

```

1. This screen allows group changes to be made to the same field for **ALL** transactions in the batch.
Note: In addition, a change to the Biennium and Batch Fiscal Month fields will also change these fields on the Batch Header.
2. Type data in fields needing correction, verify there is a **G** (=group change) in the function field and press Enter.
3. If there are any more errors, you will receive the message GROUP CHANGE COMPLETED WITH ERROR.
4. If there are no remaining errors, you will receive the message GROUP CHANGE COMPLETED SUCCESSFULLY.
5. To delete a field on all transactions in a batch, enter a **dollar sign (\$)** in the first position of the field to be deleted.
6. If your agency uses master index to reference multiple master index percent records, please note that AFRS online edits are only applied during online batch input to the first percent record of each multi-line master index. After entering a batch, you may use the group change feature above to apply the online edits to other lines of coding in your batch:
 - i. With a **G** in the function on the above screen, press Enter.
 - ii. If there are any errors, you will receive the message GROUP CHANGE COMPLETED WITH ERRORS.
 - iii. Press PF3 to go to the Batch Header Summary screen (IN.3).
 - iv. Type **E** (= Errors) in the Select column next to your batch and press Enter.

BATCH HEADER CORRECTION

Correcting a Batch Header Keying Report

There are three screens for correcting Batch Header data in the online holding file.

- The Group Error Correction – Online screen (C105P041).
- The Batch Header Error Correction online screen (C105P011).
- The Batch Balance screen (IN.1.7).

Use the chart below to determine the preferred screen for making changes to a specific Batch Header field. The chart also gives steps for accessing each screen and making corrections.

Field in Error	How to make correction
<ul style="list-style-type: none"> • Biennium • Fiscal Month 	<ol style="list-style-type: none"> 1. Transfer to Batch Header Summary screen (IN.3). 2. Type G (=Group) to the left of the batch needing correction & press [Enter]. 3. The Group Error Correction – Online screen will appear. 4. In the Bien field, type the correct biennium. 5. In both Batch FM field and Posting FM field, type the correct fiscal month. 6. Press [Enter]. <p>Note: Above corrections will apply to header & transactions.</p>
<ul style="list-style-type: none"> • Batch Date • Batch Type • Batch Number • Due Date 	<ol style="list-style-type: none"> 1. Transfer to Batch Header Summary screen (IN.3). 2. Type H (=Header) to the left of the batch needing correction & press [Enter]. 3. The Batch Header Error Correction online screen will appear. 4. Correct the Batch Date, Batch Type, and / or Batch Number by keying the correct entry in those fields and pressing [Enter]. Note: these corrections will also be applied to any transactions in the batch. 5. Correct the Due Date by keying in the correct entry and pressing [Enter]. <p>Note: The Due Date on the transactions must be corrected separately using the Group Error Correction – Online screen.</p>
<ul style="list-style-type: none"> • Transaction Count • Transaction Amount 	<ol style="list-style-type: none"> 1. Transfer to Batch Header Summary screen (IN.3). 2. Type S, R, B, H or P to the left of the batch needing correction & press [Enter]. 3. Press F6 (= Batch Balance) once the screen appears. 4. The Batch Balance Screen (IN.1.7) will appear. 5. To erase the incorrect transaction count or amount: tab to the beginning of the incorrect field and press the End (erase end of field) key. 6. Then type in the correct number or amount and press [Enter]. Note that a ten dollar amount would be keyed 1000. After the transaction is accepted, the screen will display that same amount as 0000000001000. The message BATCH HEADER REWRITTEN will appear at the bottom of the screen. If you leave and then return to this screen, that same amount will then display as 10.00.

Correcting Batch Header Date, Type, Number, Due Date

Type **H** (=header) before the listed batch on the Batch Header Summary screen (IN.3) and press [Enter] to transfer to the Batch Header Error Correction screen for making batch header changes in the above fields.

```

1. This screen is used for:
 - Verifying that the computed Count and Amount from entered transactions match the Batch Header Count and Amount.
 - Correcting the Batch Header Count and Amount.
2. To erase the incorrect transaction count or amount:
 - Tab to the beginning of the incorrect field and press the **End** (erase end of field) key.
 - Then type in the **correct number** or **amount** and press [Enter]. Note that a ten dollar amount would be keyed 1000. After the transaction is accepted, the screen will display that same amount as 0000000001000. The message BATCH HEADER REWRITTEN will appear at the bottom of the screen. If you leave and then return to this screen, that same amount will then display as 10.00

Note: The other fields appearing on this screen are protected and cannot be changed on this screen.

PRINT SELECTED AFRS REPORTS

From Screen IN.3, Select 'L'

Type **L** (=print) before one or more listed batches per page (up to 14 instances) on the Batch Header Summary screen (IN.3) and press [Enter] to display the Online Batch Reports Screen.

=== AFRS ==(IN.3.1)===== ONLINE BATCH REPORTS ===== C105P057 ===	
TR: _____	9990
Report to be Selected:	
DWP91001 Transaction Batch Report	—
DWP91002 Warrant Cancellation	—
DWP91003 Online Error Report	—
PF3=BATCH SUMMARY, PF12=MESSAGE, CLEAR=EXIT	

Reports Available on this screen:

Select	To Print
DWP91001 Transaction Batch Report	A list of all transactions in a batch.
DWP91002 Warrant Cancellation	Both of the following reports: DWP91002D Warrant Cancellation Detail Report DWP91002S Warrant Cancellation Summary Report <ul style="list-style-type: none"> Can be used as document to send to Treasurer and has signature block. It can also be used as internal documentation of SOL & ACH Returns and does not need to be sent to the Treasurer.
DWP91003 Online Error Report	A list of transactions in a batch having errors and their associated error codes/messages.

1. To print one of the above reports, type **S** (Select) in the field to the right of the report and press [Enter]. **Note:** you can only select one report at a time.
2. The following Batch Job Submission screen will appear. Change any data as needed and press [Enter].

```

Retrieve an Encumbrance

Encumbrances are used in governmental accounting to set aside fund balances in reports to management. Your agency may not use them.

An encumbrance can be retrieved for liquidating or for increasing the encumbrance balance. The encumbrance retrieved displays the original coding elements and the current dollar balance of the encumbrance as stored in the document file. If entering one of the following transaction codes (206, 207, 209, 211, 220, 221, 306, 307, 311, 313, 807, 935), use encumbrance retrieval to avoid an overnight

error. With these transaction codes, overnight edits will **require all of the coding elements and vendor number to match** those used on the original encumbering transaction.

1. Start with one of the following input screens:
 - Expanded **General Accounting Transaction Input**, IN.1.1, (C105P20E)
 - **“Browse”** screen (C105P20Z). To access, type **B** (= Browse) next to batch on Batch Summary screen (IN.3)
2. [Tab] to the **Reference Document Number** field and type in the **Current Document number and suffix of the original entry which set up the encumbrance**. If the original encumbrance did not have a suffix entered, type **00** in the suffix field. If using the “Browse” screen (C105P20Z), must also have an **A** (= Add) in the function field.
3. Press **F8** (Enc Auto) The screen will display the encumbrance coding elements and dollar balance. A message at the bottom of the screen will display ‘REFERENCE DATA FOUND AND DISPLAYED.’
4. The encumbrance displayed can be used for informational purposes, for liquidating or for increasing the encumbrance balance. If applicable, enter a transaction code and the new transaction amount. Press [Enter].

CAUTION

If the error message “Document Reference Record Not Found” displays at the bottom of the screen, there are two possible causes:

1. **Final Liquidation**
The reference document number and suffix entered were invalid because the encumbrance balance was liquidated by the prior use of one of the encumbrance liquidation transaction codes, such as 207F or 211F or others listed above.
2. **Incorrect Document Number**
The reference document number and suffix entered were incorrect. Check the current document number and suffix on the transaction that created the encumbrance. **The reference document number and suffix must match exactly** to the current document number and suffix used to create the encumbrance.
Note: To review existing document numbers in the Document File, use AFRS screens MI.5, MI.6, or Financial Reports-Encumbrances.

CAMS Interface

This capability is only available to agencies with CAMS access. It is used to send partial record of payment to CAMS when particular sub objects are used.

The AFRS to CAMS interface file captures the CAMS acquisition activity when input to AFRS using AFRS input screens. **Note:** transactions uploaded to AFRS through the AFRS interface processes are not captured for CAMS.

Agencies can view records in Descriptor Table 50 which sub-objects will send the AFRS financial transactions to CAMS. Sub-object JC is sent to CAMS under any circumstances. The **AFRS to CAMS Interface** screen will display when an AFRS financial transaction is entered on-line with the specified sub-object coding elements.

1. Access the **AFRS to CAMS Interface** screen:

From the transaction input screen, General (IN.1.1) enter the sub-object JC or any sub-object in Descriptor Table 50. Allowable sub-objects on the Descriptor Table 50 are J_, SJ, and TJ.

```

=== AFRS ===== AFRS TO CAMS INTERFACE ===== C105PM40 ===

```

To enter/edit sub-objects and batch types used to go to Table Maintenance/System Controls/CAMS Sub-object Controls (TM.3.5).

1. **Tag Number, Amount and Comments** can be entered. The amount of each asset should be entered or the interface transaction will have an amount of zero. Other coding elements are picked up from the AFRS financial transaction and are entered on the CAMS interface transaction.
2. Press [Enter]. The CAMS interface transaction will be placed in the CAMS interface file. In the nightly process the CAMS transactions in the CAMS interface file will be sent to the CAMS pending file.

Note: The transactions on the CAMS pending file are skeleton fixed asset records and not CAMS records until they are edited and released for posting to the CAMS system.

For more detailed information on CAMS, refer to the **CAMS Users Operation Manual**.

Vendor Coding Elements

The Vendor Accounting information is directly entered on the following screens:

- Expanded General Accounting Transaction Input (IN.1.1)
- Expanded General Accounting Transaction Input (C105P20Z) screen through the "Browse" feature on the IN.3 screen

VENDOR NUMBER

If a vendor number was entered on the transaction input screen, the system will read the vendor tables and do the following:

- All coding elements except Use Tax and UBI are loaded from the Vendor table.
- The coding elements Vendor Number, Vendor Name, Vendor Address, City, State, Zip, US/Foreign Indicator, TIN, Tax Type, Payment Type, and Vendor Type are protected. If a coding element is protected it can only be changed by updating the Vendor Maintenance Screen.
- The Use Tax and UBI are not protected and can be over-keyed.

EXCEPTION CODE

If an exception code was entered on the transaction input screen, the system will allow you to enter the following:

- Exception codes that do not allow TIN number will not allow entry of TIN Number, Tax Type or UBI number. They will be protected.
- The coding elements Vendor Name, Vendor Address, City, State, Zip, US/Foreign Indicator, TIN, Tax Type, Vendor Type, Use Tax, and UBI are unprotected and can be keyed over.

US/FOREIGN INDICATOR - U (United States) is the default indicator in this field. Over-key with indicator **F** (Foreign) to accommodate foreign addresses.

Note: The following SPECIAL CHARACTERS are allowed where indicated below: *Period, Quote, '@', '#', '&', '*', '-', '_', ':', and '/'*

REQUIRED FIELDS

Vendor Name – This field is required to be completed for both US and Foreign vendors and is the vendor name that will appear on the warrant.

- Position 1 must be alphanumeric, no special characters
- Position 2 must be alphanumeric, space or one of the special characters noted above
- Position 3 must be non-space, if position 2 is a space

Vendor Address – This field is required to be completed for both US and Foreign vendors and is the vendor address that will appear on the warrant.

- Line 1 must not be blank and a valid alphanumeric character must be in position 1
- Line 1, position 2, must be upper case alphanumeric or an allowed special characters as noted above
- Line 2 and 3 are optional
- Line 3 must be blank when line 2 is blank

Note for Foreign Vendors – When the switch is set for foreign vendor, the following applies:

- An entry is required in Address line 1.
- The edits requiring City, State, and ZIP are removed.
- If data is entered in any address field, it is subject to edits for allowable characters.
- A valid deliverable is still required.

Vendor City – This field is required to be completed for US vendors and is the vendor city that will appear on the warrant.

- A valid characters must be in position one.
- Valid characters are alphanumeric and the special characters are noted above.

Vendor State – This field is required to be completed for US vendors only.

Vendor Zip – This field is required to be completed for US vendors only.

- Requires 5 or 9 numeric characters, greater than all **ZERO**'s and a valid character must be in field 1.

OPTIONAL FIELDS

Other Vendor Information – Federal Tax Identification Number, Tax Type, UBI, Vendor Type, and Use Tax. These are explained and described in the **AFRS Input Record Coding Elements** manual and the **AFRS Vendor Edit Instructions** (for Exception Code will be optional if TIN is allowed).
